

MOUTH MIRRORS DR. FABRIZIO COMELLA

SPECCHIETTO DR. FABRIZIO COMELLA

DROP SHAPE MIRROR

(PROTECTED BY INTERNATIONAL PATENT)

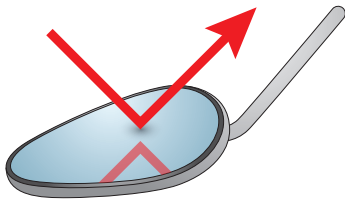

The mirror is an indispensable tool for the inspection of the oral cavity, soft tissue, anterior and posterior teeth and for conservative treatment. To improve these operations the traditional circular shape had been changed with a new "drop shape" that's able to assure a better control of the soft tissue, better protection of the tongue wall and a larger view of the superior molar and buccal cavity. Furthermore, the new "drop shape" design gives more light for a better view in the oral cavity.

SPECCHIETTO A GOCCIA

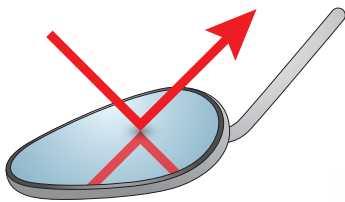

(PROTETTO DA BREVETTO INTERNAZIONALE)

Lo specchietto odontoiatrico rappresenta lo strumento necessario all'ispezione del cavo orale, dei tessuti molli, dei denti anteriori, posteriori e come protezione nelle manovre chirurgiche-conservative. Per tale ragione, la modifica al tradizionale specchietto di forma rotonda ha determinato una nuova geometria ellissoidale dello strumento; tale modifica è stata studiata per permettere maggior controllo dei tessuti molli, miglior protezione della parete linguale ed una più ampia retrospettiva dei molari superiori e del versante vestibolare, nonché una maggior incidenza della luce riflessa aumentando così la luminosità del cavo orale.
